

**Article on the Point of the Mountain
From the American Fork Citizen
January 24, 1914**

“This week loading gravel at the Point of the Mountain found five balls weighing about two pounds each. They were found in the gravel bed and are apparently made of steel.

They are so hard that neither a file nor a drill will touch them. Whether they were used in some Nephite cannon. brought here by Johnsons Army to kill the Mormons or are a part of the meteor from a different planet the finders are a loss to know.”
